

2015 Homeless adults and children - Minnesota statewide survey data

BACKGROUND AND NOTES ON THE 2015 TABLES FOR ADULTS WITH AND WITHOUT CHILDREN

These tables provide detailed survey results from the October 2015 Statewide survey of people without permanent shelter. The data are provided to help planners and service providers develop summary information about the characteristics of homeless people, their experiences and needs, and the barriers that prevent them from obtaining housing.

For actual **counts** of people who were homeless on October 22, 2015, see the report *Statewide and Region Counts of Homeless People* found at http://mnhomeless.org/minnesota-homeless-study/detailed-data-counts/2015/All-2015-Homeless-Counts_3-16.pdf. Other reports regarding the 2015 homeless study are published at www.mnhomeless.org as they are available.

The statewide data tables are based on interviews with 1,502 men and 1,428 women in emergency shelters, domestic violence shelters, transitional housing programs, and a few Rapid Rehousing programs that continue to function as transitional housing sites. Another 1,112 interviews were conducted with adults in non-shelter locations. According to the interviews, our sample of adult respondents had a total of 1,837 children with them.

In the data tables, survey results have been weighted to represent the 2,131 men and 2,295 women who were in temporary housing programs on the night of the survey. According to shelter providers, 3,032 children were with their parents or another adult on the night of the survey. An additional 264 children were with adult parents who were not in shelters on the night of the survey.

NOTES FOR INTERPRETING THE DATA TABLES

The tables contain weighted estimates. This means that the survey results have been statistically adjusted to reflect the actual populations residing in emergency shelters, domestic violence shelters, transitional housing programs, and a few Rapid Rehousing programs that continue to function as transitional housing on the day of the survey. (We interviewed a large sample, not every person in each shelter.)

For non-shelter locations, the data are not weighted. We do not adjust the numbers for non-sheltered respondents, because the actual numbers of men, women, and children on the streets or in non-shelter locations on the day of the survey is unknown.

You should use the percentages, not the frequencies, when interpreting these tables. Sample weighting, such as we have performed with these data, uses calculations that can result in "fractional" persons. When we use computer rounding to adjust for this, the numbers do not always add up exactly to the total for each category.

The total number of responses is different for each question, based on the number of valid responses to that question. Missing data (cases when a respondent did not answer a question) are not reported or included in the percentages.

There may be small difference in the medians reported in these tables versus those reported in aggregate reports. This is due to inconsistencies in how medians are calculated within the statistical software (SPSS).

Not all Continuum of Care regions have all categories of shelters. That is why some shelter types are missing in certain regional reports.

Unaccompanied minors (under 18) are not included in these tables. They will be included in separate tables about the characteristics of homeless youth ages 24 and younger, when available.

The percentages apply only to the respondents who were qualified to answer that question. Some tables report data that were collected only from those who answered a previous question in a certain way. For example, many questions about children are asked only of those adults who have children with them, so the percentages apply only to that group.

The Metro region includes the following seven counties: Anoka, Carver, Dakota, Hennepin, Ramsey, Scott, and Washington.

WEIGHTING TECHNIQUES

The 2015 survey data were weighted to reflect the actual number of sheltered homeless persons, as indicated by specific site counts of people in shelters throughout the state on October 22, 2015. Only sites from which there were completed interviews were used in the weighting. The actual number of homeless persons in non-sheltered locations cannot be accurately estimated, so these cases were given a weight of 1.0.

The weightings were calculated by a sample-balancing program available in the Princeton Statistical Program (P-Stat). Individual case weights were computed based on:

- Individual sites.
- Gender (male, female).
- Region (northwest, northeast, central, west central, southwest, southeast, Anoka, Dakota, Hennepin, Scott/Carver, Ramsey, Washington, and St. Louis County).
- Shelter type (emergency, transitional/Rapid Rehousing, domestic violence shelter).

Weightings were used to estimate the characteristics of homeless persons in Minnesota's temporary housing programs on the night of the survey based on the sample of 2,416 interviews with adults. The actual number of adults in temporary housing programs on the night of the survey was 4,426. When this is combined with the results of the 1,112 interviews completed with adults in non-shelter locations, the total sample for which estimates are available is 5,538.

If questions on weighting techniques, contact the research staff at brian.pittman@wilder.org.

Housing history

51. Are you currently on a waiting list for public housing, Section 8 housing, or some other type of housing that offers financial assistance?
